SKILLS

Android Development: Jetpack Compose, Kotlin Multiplatform (KMP), Kotlin Coroutines and Flows, Android Jetpack components, Material Design, Room Database, DataStore, Retrofit, Ktor.

Architectural Patterns: Clean Architecture, MVVM, MVI, dependency injection using Dagger, Hilt, and Koin.

AI & Backend: Retrieval-Augmented Generation (RAG), Vector Databases (Qdrant), Semantic Search, LLM Embeddings. Backend development with Django and Django REST framework.

Testing: UI automation using Espresso and Compose Test Tags, JUnit parameterized tests and MockK.

WORK EXPERIENCE

Intuit Inc, Bangalore

Software Engineer 2 - Android

March 2025 - Present

Virtual Expert Platform

- Improved user experience for TurboTax and QuickBooks customers by resolving critical bugs in VEP mobile SDKs (chat, video, screenshare), ensuring reliable and streamlined connections to tax experts.
- Collaborated with the team under a tight deadline to integrate a new video/screenshare SDK alongside the older vendor, building an **abstraction layer** to facilitate its future deprecation.
- Supported **Jetpack Compose migration** across multiple assets owned by VEP, driving modernization of the UI layer with proper state management and recomposition patterns.

One Intuit Contact Us SDK

- Owned the Intuit-wide “Contact Us” mobile SDK, providing end-to-end support and maintenance for internal partner teams and ensuring code quality with peer reviews.
- Refactored the SDK to an **MVI** architecture to facilitate future **Compose migration** and implemented deeplinking, achieving a **7%** increase in clickthrough rate.
- Migrated chat experience by integrating **GenAI widget** which bridges AI with HI for tax filing assistance.

Zoho Corporation, Chennai

Member Technical Staff - Android

May 2022 - March 2025

Kotlin Multiplatform SDK

- Developed a **Kotlin Multiplatform** library for Zoho CRM's shared domain and data layers with network services using **Ktor**, and **Koin DI** ensuring seamless functionality across Android, iOS, and macOS platforms.
- Conducted in-depth **KMP performance and interop analysis** on Android and iOS, identifying critical performance bottlenecks and interop issues in the early alpha stage, informing the team's adoption strategy.
- Enforced separation of concerns, unidirectional data flow, and **Clean Architecture** principles to improve code maintainability, resulting in **30% reduction** in development time.

Database Migration Tool

- Built a database migration tool using Gradle, Kotlin, and XML schema parsing to automate SQL DDL query generation at compile time for Android, iOS, and macOS platforms.
- Integrated migration in CI/CD to boost developer productivity, cutting database maintenance and testing workloads by **25%**.

Use Case Testing Framework

- Created a robust framework for Use Case Testing in the domain and data layer, improving testing efficiency and reducing reliance on manual testing by **60%**, using JUnit parameterized tests for data-driven testing, MockK for dependency mocking, and **Espresso** for UI automation.

PROJECTS

NewsBuddy | AI News Companion | [Playstore Link](#)

- Built and shipped a cross-platform news app using **Kotlin Multiplatform** and **Jetpack Compose**, featuring AI-generated daily briefings across 8 categories with follow-up conversational Q&A and source attribution.
- Implemented **Clean Architecture** with **MVVM**, **Kotlin Coroutines and Flows** for reactive state management, and **Ktor** for networking — with all chat data stored locally using on-device persistence for user privacy.
- Engineered a **Django REST backend** with a **RAG pipeline** using **Gemini embeddings** and **Qdrant vector database**, enabling semantic search across daily articles to power context-aware AI responses.

EDUCATION

B.E CSE at SRM Easwari Engineering College, Chennai | 8.86 CGPA with distinction

2018 - 2022
